Recruitment Committee  
University of Michigan  
Ann Arbor, MI

Dear Hiring Committee,

I am writing to apply for the Software Engineer position in the Robotics Department at the University of Michigan. I was drawn to this opportunity because it combines software development, problem solving, and education, which are all areas I've been deeply involved in during my academic and professional experiences.

I earned my Bachelor's degree in Computer Science and Advertising from the University of Illinois Urbana-Champaign and am currently pursuing a Master's in Computer Science at Georgia Tech. I have worked across different parts of software development, including backend and frontend systems, using languages like Python, JavaScript, and SQL.

As a Global Technology Intern at McDonald's, I developed C# APIs and helped build AWS-based data pipelines to migrate and validate large volumes of fraud detection data. This experience taught me how to debug complex systems, work within a collaborative technical team, and ensure that code is reliable and efficient. At Illinois Public Media, I designed and maintained PHP plugins and API integrations for a content management system that supported thousands of users. I also automated deployment processes using Gulp and NPM, which helped streamline updates and reduce errors.

Through these projects, I've learned how to translate user needs into dependable, well-documented software and how to communicate effectively with both technical and non-technical collaborators. I value teamwork, attention to detail, and continuous improvement, and I believe those values align well with Michigan Engineering's mission to create inclusive and innovative solutions for the common good.

I would be excited to contribute to the Robotics Department by developing and supporting software that helps advance research, teaching, and innovation. Thank you for considering my application. I look forward to the opportunity to discuss how my background and enthusiasm can support your team's goals.

Sincerely,

Adarsh Bhandari

## EXPERIENCE

---

- **McDonald's** Chicago, IL  
*Global Technology Intern* May 2025 - August 2025
  - Spearheaded the development of **C Sharp** APIs and **mutation tests** to facilitate a migration from one fraud detection system to another, improving code reliability and ensuring correctness across fraud-related endpoints.
  - Migrated millions of legacy fraud-data points via **AWS pipeline** to a new detection service, enabling unified fraud insights and saving McDonald's **millions of dollars annually**.
- **Illinois Public Media** Champaign, IL  
*Software and Web Development Intern* May 2024 - December 2024
  - Developed and maintained **PHP** plugins within the **ExpressionEngine** content management system, ensuring smooth website functionality for 5000+ active website users.
  - Created API responses and data workflows to send and receive data from NPR news sites, improving data flow and integration.
  - Automated and optimized website updates, build scripts, and tasks using **Gulp** and **NPM**, enhancing workflow efficiency.
- **University of Illinois** Champaign, IL  
*Computer Science Course Assistant* Jan 2024 - May 2024
  - Led recitation sections for a **C++** based data structures course based on topics such as Pointers, Linked Lists, Trees, and Graphs.
- **EntreCORPS** Champaign, IL  
*Technical Consultant* Feb 2023 - Aug 2023
  - Conducted in-depth **market research** and **analysis** to identify new business opportunities and potential growth areas for a job training and career counseling business.
  - Delivered high impact presentations using **Powerpoint** to founding members of the organization and conducted data analysis using **Power BI**.

## EDUCATION

---

- **Georgia Institute of Technology** Atlanta, GA  
*Masters of Science in Computer Science* Aug. 2025 - Present
- **University of Illinois: Urbana-Champaign** Champaign, IL  
*Bachelors of Science in Computer Science and Advertising; GPA: 3.73* Aug. 2022 - May. 2025

## CORE COMPETENCIES

---

- **Languages:** PHP, Python, C++, Javascript, MySQL, HTML, CSS, LaTeX
- **Tools:** Excel, Git, Docker, MySQL Workbench, ExpressionEngine, npm, Gulp, PowerBI, Jira, Confluence
- **Libraries:** Flask, Plotly, Matplotlib, Pandas, Bootstrap

## PROJECTS

---

- **NoteBookify:** Mobile web app produced with **Flask**, **HTML**, **CSS (Bootstrap)**, and **Javascript** that shows users stylized data and graphs (through **Plotly** and **Pandas**) about their top Spotify statistics and playlists. Data analysis conducted with Plotly on playlists includes treemaps depicting Album and Artist relationships, histograms displaying tempos and releases of tracks, and radar charts showcasing miscellaneous data.
- **KMP Algorithm:** Implemented the KMP string searching algorithm in C++ and wrote unit tests to prove its validity. Utilized **Matplotlib** and **Jupyter** Notebooks to benchmark the big-O runtime of the algorithm.
