Dear University of Michigan Recruiting Team,

I am writing to express my interest in the Applications Programmer position at the University of Michigan. I am eager to bring my growing knowledge of data structures, data manipulation, and programming interactive applications to your organization.

Throughout my career, I have displayed leadership and task management through work and education. While tackling my new degree I have worked with and led groups of students to accomplish multiple complex school projects. During my career at Strata Oncology one of my many roles in the company was leading the archiving system for patient samples. I was in charge of creating and maintaining a system that allowed the storage of up to a thousand samples every month, and the retrieval of samples from years in the past. Now at my current job with Versiti Blood Center, I have learned how to stay calm and composed during stressful situations, and proved to be a reliable source when something needs to be done. With extreme attention to detail to ensure hospitals are getting the products they need, I am comfortable with large responsibilities that require time management and problem solving skills.

With a solid foundation in Java development, I have created multiple codebases implementing database management. This past semester I expanded my knowledge with a strong understanding of data structures by enhancing a robust menu driven program which holds and manages student records. With each iteration we have used a different data structure to analyze the increase in accessibility and efficiency of a CRUD application. I have been using Java throughout my entire school process while also gaining experience with Python, PHP, MySQL, JavaScript, and Kotlin through multiple different projects. I am now looking forward to learning more over the summer and in future semesters as I continue to grow and improve.

My experience implementing and operating a multitude of applications, coupled with my growing knowledge of programming practices aligns closely with the requirements and goals of this role. I am excited about the opportunity to contribute to such a dynamic, fast-paced environment and am eager to discuss how my passion for software engineering and collaborative leadership skills can support the University of Michigan's business objectives.

Thank you for considering my application. I look forward to discussing my qualifications in further detail.

Sincerely,

Cody Musulin

COMPUTER SCIENCE | BIOMEDICAL SCIENCE | BUSINESS ADMINISTRATION

EDUCATION & ACCOLADES

B.S., Biomedical Sciences, Business Administration Minor, Central Michigan University, Mount Pleasant MI

- Relevant coursework: Organic chemistry, Biological Genetics and Evolution, Anatomy, Physics, Biochemistry

A.S., Computer Science, Washtenaw Community College, Ann Arbor MI - May 2024

- Relevant coursework: Data manipulation, Web Programming, Building Interactive Applications, Database Planning and Building

B.S., Computer Science, Eastern Michigan University, Ypsilanti MI - May 2026

- Relevant coursework: Computer Organization, Algorithms Data Structures, Computational Discrete Structs, Computer Networking, Software Engineering Solutions

Member of National Society of Collegiate Scholars

AREAS OF EXPERTISE

- **Programming Experience:** Java, Java Spring, php, Python, Kotlin, html, SQL, Bash, Powershell and Linux.
- **Involved in multiple projects with website and app development, creating programs with data management.**
- **Proficiency with:** Git, Github, Microsoft Word, Excel, and Office
- **Proven ability to communicate, collaborate, and negotiate effectively with professionals at all levels of an organization.**
- **Adept at prioritizing, multi-tasking, and allocating resources in fast-paced, ever-changing work environments.**

Versiti Blood Center, Farmington, MI

July 2025-Present

Blood Distribution Specialist

Manage the safe and timely distribution of blood products to hospitals, clinics, and emergency departments in accordance with FDA, AABB, and organizational regulations.

- Verify, select, and prepare blood components based on physician orders and patient compatibility requirements.
- Monitor inventory levels and ensure appropriate stock rotation to reduce waste and maintain product viability.
- Coordinate urgent and routine deliveries while prioritizing critical patient needs and emergency requests.
- Utilize laboratory information systems (WellSky) and tracking software (EliteExtra) to maintain accurate records of product handling, storage, and distribution.
- Collaborate with medical staff, couriers, and laboratory personnel to ensure efficient communication and product availability.
- Perform quality control checks and ensure compliance with safety protocols and temperature regulation requirements.
- Investigate and resolve distribution discrepancies or documentation issues to ensure full traceability and patient safety.

Strata Oncology, Ann Arbor, MI

Mar 2022-Nov 2023

Clinical Laboratory Accessioner

Ensuring quality samples come into the lab, and medical record match up with each patient sample.

- Managed daily handling of sensitive patient information ensuring strict adherence to confidentiality protocols, contributing to a 0% data breach incident rate.
- Played a pivotal role in clinical laboratory operations, conducting precise microdissection of patient samples, maintaining laboratory machines while efficiently and reliably archiving patient samples.
- Led company archiving of patient samples, retrieving and storing thousands of samples from 2019-present as requested and needed.
