

Dear Hiring Manager,

I am writing to express my interest in the Software Developer position with the University of Michigan Robotics department. As a Senior Software Engineer with over 8 years of experience, I bring the technical expertise and collaborative mindset needed for this role.

I have direct experience working at the University of Michigan, where I spent three years (2012-2015) as an Applications Programmer/Analyst and Junior Web Application Developer. During this time, I developed web applications, worked with databases, and collaborated with multiple departments and non-technical stakeholders.

My technical background aligns well with your requirements: I am proficient in JavaScript, Python, and web application development, with extensive experience in database interactions, API development, and building custom tools for diverse user needs. Throughout my career at LinkedIn and other organizations, I have successfully translated business requirements into practical technical solutions while working closely with cross-functional teams.

I am excited about the opportunity to return to the University of Michigan and contribute to the innovative work happening in the Robotics department.

Thank you for your consideration.

Sincerely,
Eugene Malin

SUMMARY

Full-stack engineer with expertise across React, TypeScript, Node.js, PHP, and web technologies, passionate about building scalable, user-focused web solutions from database to UI. Experienced in university environments with hands-on knowledge of academic systems and workflows, having architected web applications and digital tools during tenure at University of Michigan. Skilled in content management systems, API integration, and performance optimization, with proven ability to manage growing portfolios of web services while collaborating with communications teams and stakeholders. Expert at driving technical improvements across entire web stack and eager to support educational mission through innovative web development at a leading academic institution.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, PHP, Python, Java, SQL

Frontend: React, Ember.js, Angular.js, HTML5, CSS3, Tailwind CSS, Responsive Design, Web Accessibility, WCAG

Backend: Node.js, Express, Java, GraphQL, REST APIs, PHP

CMS & Content: Drupal, WordPress, Content Management Systems

Databases: MySQL, MongoDB, Elasticsearch

Authentication: SSO, OAUTH integration

Cloud & DevOps: AWS (EC2, S3, RDS), Docker, CI/CD

Tools: Git, GitHub, Jenkins, Figma, Github Copilot AI

EXPERIENCE

*LinkedIn, **Senior Software Engineer***

Nov 2019 - July 2025

- Led development of recruiter jobs and reporting projects for LinkedIn Recruiter platform serving 28,000+ global customers including over half of Fortune 100 companies, coordinating with cross-functional product and data teams.
- Developed scalable TypeScript components using modern development practices, delivering customer-facing features across multiple project phases while maintaining code quality standards.
- Built enterprise-grade hiring workflow features used by global recruiters, leveraging EmberJS, TypeScript, and GraphQL APIs to streamline user experiences and support organizational goals.
- Contributed to team tech stack migrations from legacy email platforms and Java backend systems, refactoring APIs and improving UI performance during platform modernization efforts.
- Used AI technologies: Github Copilot, Claude, in-house stack, while working on projects like LinkedIn Hiring Assistant and others.

*Ripple Science, **Software Engineer***

Jul 2017 - Sep 2019

- Architected and delivered full-stack SaaS features as one of the early engineers, owning React frontend, Node.js backend, MongoDB database, and AWS/Docker/Python infrastructure and tooling during rapid startup growth.
- Optimized database performance by 500% through strategic denormalization, indexing, and query optimization, directly supporting platform scalability under increased user load.
- Mentored junior developers while shipping frequent releases and automating deployment processes, contributing to engineering culture and operational efficiency in fast-paced startup environment.

*Deque Systems, **JavaScript Developer***

May 2015 - Jun 2017

- Developed new features and refactored code for a PHP, MySQL, and AngularJS internal web service.
- Contributed to feature enhancements and built reusable components for Amaze SDK, enabling accessibility solutions for

websites/apps, resulting in improved user experience.

- Created JavaScript and Node.js solutions and developed native Android and iOS educational apps for F500 clients.
- Mentored new developers, improved coding standards such as introducing Jasmine unit testing, and automated processes to improve team efficiency.

*University of Michigan, **Applications Developer***

Feb 2012 - May 2015

- Built full-stack university information systems for multiple departments, developing Drupal/PHP/MySQL backends, JavaScript UIs, and administrative interfaces for campus services (~10k monthly visits, ~20k at peak)
- Developed enterprise solutions including fundraising platform analytics, file management systems with Google Drive integration, and automated data processing workflows
- Implemented modern development practices including unit testing (C#, Java/jUnit), continuous integration with Selenium, and API integrations across ASP.NET MVC and Java/Spring applications
