Professional Summary

I am a versatile and results-driven computer programmer with over 12 years of experience in full-stack software development, IT support services, and cyber security across multiple diverse industries. I am skilled in developing custom solutions, managing IT infrastructures, optimizing business processes, and hardening systems against cyber attacks. I have a proven track record of troubleshooting complex systems, developing efficient solutions, and seeing projects through from concept to deployment. My passion is solving real-world problems with technology and delivering the best possible results for the organization. I never shy away from complex problems be they academic, strategic, or logistic; I have a wealth of academic excellence and experience to apply to discovering, planning, and executing a solution where everyone wins. I always enjoy the opportunity to combine theory and practice to deliver an unique and ideal solution.
