

HITESH BHOSALE

✉ hteshbhosale@gmail.com

Dear Hiring Committee,

I'm excited to apply for the software development role within the Robotics Department. What drew me to this opportunity is the combination of hands-on application development and the mission of Michigan Engineering — using technology to support a collaborative, people-first future. That aligns closely with the work I've been pursuing and what I want to continue contributing to in my career.

I recently completed my M.S. in Computer Science and have full-stack engineering experience across the entire development lifecycle—from requirements and database design to testing, deployment, and ongoing support. At Quara Life-Sciences, I built an internal portal that automated reporting for 300+ employees and proactively monitored and improved system performance.

I develop scalable web tools using JavaScript/TypeScript, React, Node.js, Python, and SQL databases, and work closely with non-technical stakeholders to turn their needs into secure, user-friendly features. In Agile environments, I've contributed to code reviews, testing, and ensuring best-practice security measures such as RBAC and TLS.

What excites me most about joining Michigan Engineering is the opportunity to support robotics research and departmental operations through purposeful software — building tools that allow students, faculty, and staff to focus more on innovation and less on technical friction. I value environments where teamwork, curiosity, and service are core to the culture, and I see that reflected strongly at Michigan.

Thank you for considering my application. I would love the chance to support the Robotics Department's mission by delivering reliable, user-friendly applications and continuously improving the systems people depend on every day.

Warmly,
Hitesh Bhosale

EDUCATION

University of Georgia

Master of Science in Computer Science

Athens, GA

May 2025

Savitribai Phule Pune University

Bachelor of Science in Mechanical Engineering

Pune, India

June 2022

TECHNICAL SKILLS

Programming Languages: Java, JavaScript/TypeScript, PHP, C++, Python

Front-end Development: HTML/CSS, React, Next.js, Redux, Tailwind CSS

Back-end Development: Spring Boot, Django

Database Management: MongoDB, MySQL, PostgreSQL

Tools & DevOps: Git, GitHub, AWS, Jenkins, Docker, Jest, Cypress, Linux/Unix

EXPERIENCE

Software Engineer Intern - Fullstack

Sept 2025 – Present

Altheros Capital

USA

- Developing interactive frontend interfaces with **React** and building backend APIs and database services using **TypeScript**, **Node.js**, and **MySQL**.

Software Engineer - Fullstack

July 2022 – July 2023

Quara Life-Sciences

India

- Built an internal company portal with **React**, **D3.js**, and **TailwindCSS**, eliminating manual Excel workflows and increasing reporting efficiency by 68% for 300+ employees.
- Improved performance of **Python Django** REST APIs by adding **Redis** caching and tuning **PostgreSQL** queries, cutting response times by 2.3× on datasets of 150K+ records under concurrent load.
- Deployed containerized applications on **Linux/Unix**-based **AWS EC2** instances using **Docker**, and automated builds/releases with **GitHub Actions** and **Jenkins**, reducing deployment errors and speeding up delivery.
- Implemented **JWT** authentication, role-based access control, and **TLS** encryption using **Django Security**, ensuring secure access to sensitive employee and company data.

Software Developer Intern

March 2022 – June 2022

Cognizant

India

- Contributed to a large-scale banking platform, building **React** interfaces that improved transaction transparency and boosted customer engagement by 25%.
- Enhanced accessibility by implementing **ARIA** roles and **WCAG 2.0** standards, making the platform usable for a wider range of customers.
- Optimized **PHP** APIs through code refactoring and database indexing, improving response times by 38% during high-traffic periods.
- Reduced frontend load times by 50% via **React** rendering optimizations and asset compression, improving responsiveness and retention.

Software Engineer Intern - Fullstack

Feb 2021 – May 2021

Analysed (Startup)

India

- Helped design and develop a fitness web app with **React** and **Redux**, building reusable components and clean state management to support rapid feature development.
- Created RESTful APIs with **PHP** and **MySQL**, applying normalized schemas and **OOP** design for reliable, scalable data handling.
- Integrated **OAuth 2.0** authentication for secure user logins, and worked closely with design/QA teams to deliver intuitive and user-friendly features.

PROJECTS

Secure Personal Finance Dashboard | *Next.js, TypeScript, Appwrite, Plaid, Dwolla, TailwindCSS, PostgreSQL*

- Developed a full-stack finance dashboard integrating **Plaid** for bank data aggregation and **Dwolla** for secure transfers, simulating real-world fintech workflows.
- Implemented **RBAC**-based authentication with **Appwrite** and designed async transaction pipelines to ensure secure, seamless user experience.

UGA Campus Ticketing System | *React, Java, Spring Boot, PostgreSQL*

- Led development of a dynamic movie ticketing system with secure **TLS** login and hashed password authentication, featuring a responsive UI.
- Built RESTful APIs with **Spring Boot** and integrated real-time booking logic using **React Query**, achieving sub-300ms query response times through optimized database indexing.

Real-time Property Listing Platform | *React.js, Express.js, Prisma, MongoDB, Socket.io*

- Developed a modular real estate platform with **JWT**-secured authentication and integrated image uploads and rich text editing for dynamic listings.
- Built a real-time chat feature with **Socket.io** and enhanced navigation with **React Router** loaders and loading skeletons, improving engagement and UX.
