Hiring Committee

University of Michigan

Ann Arbor, MI

Dear Hiring Committee,

I'm excited to apply for the Applications Programmer Associate position with the University of Michigan's Robotics Department. As a few classes away from completing my Computer Science degree and someone who's passionate about building efficient, user-friendly software, I'm eager to contribute to Michigan Engineering's mission of innovation and service.

Through my coursework and hands-on projects, I've gained experience in **Python, JavaScript, and database management**, developing small applications that streamline workflows and improve usability. I particularly enjoy translating user needs into functional solutions—a skill I refined while collaborating on academic projects that required both technical problem-solving and clear communication between technical and non-technical teammates.

I'm drawn to this position because it combines technical development with collaboration across the Robotics department. I value environments that encourage curiosity, teamwork, and continuous improvement—qualities that are central to Michigan Engineering's culture. The opportunity to contribute to a program that merges technology and education, while learning from experienced engineers and developers, aligns perfectly with my career goals.

I would appreciate the chance to discuss how my technical foundation, problem-solving approach, and enthusiasm for Michigan's people-first mission can support your team. Thank you for your time and consideration.

Warm regards,

Jason Cava
