Hiring Team

University of Michigan College of Engineering – Robotics Department

Dear Hiring Team,

I'm writing to apply for the Applications Programmer Associate position in the Robotics Department. As a recent graduate of the University of Michigan with a degree in Computer Science and Engineering, I'm excited about the opportunity to return to Ann Arbor and contribute to the innovative work happening within Michigan Engineering.

Through my coursework and projects at U-M, I built a strong foundation in software development, testing, and collaborative problem-solving. In EECS 485: Web Systems, I gained hands-on experience with full-stack web development, building scalable applications using HTML, CSS, JavaScript, Flask, and SQL. In EECS 481: Software Engineering, I deepened my understanding of software quality assurance, automation, and real-world development workflows — including submitting and merging an open-source bug fix through a CI/CD pipeline. I've also worked with Python extensively for data processing and backend development, and I enjoy translating user needs into practical, reliable tools.

Beyond technical skills, I value clear communication and collaboration. Courses such as EECS 497: Human-Centered Software Development taught me to design software around user needs and to work effectively in cross-functional teams — both of which I see reflected in this role's focus on supporting Robotics faculty, students, and staff through well-designed applications.

Although I'm currently based in Shelby Township, I would love the opportunity to relocate back to Ann Arbor to rejoin the Michigan community and contribute to the Robotics Department's mission. Michigan shaped much of my approach to learning, teamwork, and problem-solving, and I would be proud to continue growing here as part of the staff.

Thank you for considering my application. I would appreciate the chance to discuss how my background and enthusiasm for Michigan Engineering can contribute to the department's work.

Sincerely,

Christian Daman

Education

University of Michigan - Ann Arbor, MI
Bachelor of Science in Engineering - Computer Science

GPA: 3.1/4

Course Projects

EECS 481 - Software Engineering - Fall '24

Explored the principles and human factors of modern software engineering, emphasizing how real-world teams manage complexity, risk, and quality at scale.

Completed assignments and projects involving:

- Automated and manual testing strategies
- Fault localization and mutation testing
- Code coverage measurement and analysis
- Static/dynamic analyses and quality metrics
- Requirements elicitation and specification
- Contributing a bug fix to an open-source project through a full review-and-patch process

EECS 486 - Information Retrieval and Web Search - Winter '24

Worked with a project team to design and implement a lecture content retrieval system for the term project. Completed data processing, indexing, and retrieval projects, utilizing:

- Vector-space model
- TF-IDF and other common weight schemes
- Web crawling + link analysis (PageRank)
- Precision/recall analysis metrics
- Language model fundamentals

EECS 485 - Web Systems - Fall '23

Completed full-stack web development projects including static and server-side/client-side dynamic web pages, using concepts such as:

- Secure web distributed systems using CRUD operations
- Shell scripting
- When to use specific web tech in a large system

EECS 497 - Human-Centered Software Development - Winter '23

Completed a team-based, user centered software project - a "gamified" planner - incorporating:

- Effective design strategies and project management methodologies
- Prototyping skills such as customer discovery and contextual inquiry
- Team dynamics management
- Testing strategies

Experience

St. Rita Family Services

Sterling Heights, MI

Technical/Office Support

May - August 2013

- Provided technical support for all office computers to meet internal business needs and to protect the privacy of client information
- Customized HIPAA (Health Insurance Portability and Accountability Act) and MIHP (Maternal Infant Health Provider) forms for use with MDCH (Michigan Department of Community Health)

Technical Skills

C++	LLM/Agentic Workflows	Data Processing, Indexing, Retrieval	<u>Full-Stack Web Development:</u>
Python	Linux CLI Navigation	Cloud Systems (AWS)	HTML/CSS, Templating, Asynch.
Java	Shell Scripting	Testing + Quality Metrics	Javascript, Flask, React, Thread/Socket
	Figma Prototyping		Networking, SQL
