Dear Hiring Committee,

I'm quite excited to apply for the Applications Programmer Associate position with the Robotics Department. I am particularly interested in this role because it combines software development with direct user support, allowing me to build practical tools that help others do their work efficiently.

I have strong experience developing and maintaining web applications using JavaScript and Python. I have worked with Git in collaborative environments, written database queries to support application functionality, and monitored systems to identify and resolve issues. As a Software Development intern at U.S. News & World Report, I built and contributed to features in both backend and frontend systems. Working in Agile sprints, I collaborated with engineers, reviewed code, and debugged issues to ensure reliable operation.

I am drawn to Michigan Engineering because of its commitment to collaboration and innovation. The Robotics Department's focus on providing tools that students, staff, and researchers depend on aligns with how I approach software development: thoughtfully, with attention to detail, and with an eye toward impact. The hybrid work environment and emphasis on continuous improvement also match the way I work best: structured, proactive, and focused on learning.

Thank you for your time and consideration. I would welcome the opportunity to discuss how I can contribute to the Robotics Department and support its mission.

Sincerely,
Madeline Moldrem
