

Dear Hiring Committee,

I am excited to apply for the Applications Programmer Associate position in the Robotics Department. I am a graduate from the University of Michigan's School of Information with a concentration in Information Analysis and a minor in History. I bring a combination of technical skills and analytical thinking that aligns closely with the responsibilities of this role. My professional experience as an analyst at Wayfair, my senior capstone with the Bentley Historical Library, and my academic training in programming and data analysis have prepared me to develop data-driven applications.

In my current job as a Commercial Analyst at Wayfair, I manage inventory strategies across various retail locations, combining operational tasks with SQL-based analytics. I support projects that integrate data into analytical tools, helping both my team and other departments make informed decisions. This experience has improved my ability to translate needs into practical data solutions. My earlier internship at Wayfair laid the technical groundwork for this position, where I developed dashboards in Google BigQuery and Looker to monitor stock availability. This gave me hands-on experience writing SQL queries and creating user-friendly dashboards to display key metrics. These roles taught me to approach problems step by step and communicate clearly with both technical and non-technical teams.

My senior year capstone project with the Bentley Historical Library increased my understanding of how to design tools and analyses for users. My team's project analyzed ten years of patron request data to identify which topics the library should prioritize in future collecting. I built a Python script to classify and visualize collection usage trends. Our final deliverable included a user-friendly Python script that allows Bentley staff with varying technical backgrounds to analyze future data independently. Throughout the project, we met regularly with our client to ensure our analysis met their needs and goals. This experience taught me how to translate data insights into practical tools that support decision-making.

In addition to my professional and project experience, my coursework in the Information Analysis program, including courses in data-oriented programming and applications, has given me strong coding skills. I have built web applications and data pipelines using Python, CSS, SQL, and R. These classes trained me to test code systematically and write maintainable programs. I'm excited about this opportunity because it combines software development with meaningful service. I'd be glad to contribute to building reliable, efficient systems that support the department's teaching and research goals. Thank you for considering my application. I look forward to learning more about this opportunity.

Sincerely,
Milo Neirink

Education

University of Michigan**Ann Arbor, MI***Bachelor of Science in Information, Minor in History*

May, 2025

- GPA: 3.9/4.0
- Concentration in Information Analysis

Experience

Wayfair**Boston, MA***Commercial Analyst*

July, 2025 - Present

- Manage inventory for three retail locations through ordering and markdowns to optimize assortment.
- Anticipate inventory gaps through data-driven forecasting and analysis.
- Collaborate with merchandising, supplier management, analytics, and store teams to align on inventory strategies.
- Support SQL-based projects that build analytical tools integrating company data to deliver new insights.

LSA Technology Services**Ann Arbor, MI***Clerk*

September, 2022 - April, 2025

- Provided access to technical equipment
- Resolved customer inquiries and provided expert guidance on equipment usage and room bookings
- Tested, cleaned, and troubleshooted loan equipment and rooms

Wayfair**Boston, MA***Business Analyst Intern*

June, 2024 - August, 2024

- Enhanced data analysis skills by developing dashboards using Google BigQuery and Looker to monitor out-of-stock items, improving inventory management for ten retail locations
- Improved networking and communication skills by collaborating with cross-functional teams
- Placed orders to resupply multiple Wayfair retail locations, ensuring availability for hundreds of distinct items

Michigan Research and Discovery Scholars**Ann Arbor, MI***Peer Mentor*

August, 2022 - April, 2023

- Developed leadership skills in meetings and workshops
- Leader and role model in the MRADS community; Planned and implemented community-wide programs
- Connected with group of eight mentees in mentor-mentee events and meetings

Academic Projects

Senior Capstone Project: Bringing User Data into Collection Development Strategies

September, 2024 - April 2025

- Analyzed ten years of Bentley Historical Library data using Python to identify trends in collection requests, enhancing decision-making for future acquisitions.
- Collaborated with library staff to develop data visualizations and reports to present findings.

Extracurriculars

Michigan Data Science Team - Analyzed CDC National Health and Nutrition Examination Survey datasets**Ecodata** - Partnered with Women's Center of Southeastern Michigan in creating data visualizations

Awards/Honors

- University Honors (Dec 2021 - May 2025)
- James B. Angell Scholar (March 2022, March 2025)
- National Honor Society (Alfred G. Zink Chapter)
- Frankenmuth Conservation Club Scholarship

Special Skills

- Experienced with Microsoft Office Suite and Google Workspace
- Proficient in Python, C++, SQL/GBQ, and R
- Information analysis and visualization with Looker Studio and Pandas
