OBJECTIVE

Seeking a collaborative workplace to create innovative solutions to complex interface development and design challenges. Particular interest in JavaScript frameworks, front end development, and user interface.

SKILLS & TECHNOLOGIES

LANGUAGES JavaScript, CSS / SCSS, HTML, C#, Java

LIBRARIES Vue.js, React.js, Polymer.js, JQuery, Gatsby, Node.js, Express.js, AngularJS

TOOLS Salesforce Commerce Cloud, Sitecore, Wordpress, Canvas, Moodle, Bb Ultra, Jira, npm, webpack, Grunt, Bower, Git, Unity

PROFESSIONAL EXPERIENCE

Front End Web Developer at Keypath Education, Remote, MI.

2023-Present

Built and maintained university websites based in NA and APAC • Developed reusable Vue.js web components for building courses in Learning Management Systems • Contributed to dozens of Git repositories over many version iterations • Built 15+ Vue.js Single Page Applications purpose built to aid in learning in live university courses. • Leveraged Vue.js build tooling and state management including Vite, Vuex and Pinia • Designed systems using LTI (Learning Tools Interoperability) to manage Student/Faculty user data. Built code to support WCAG/Screen Reader users. • Developed themes using LMS Canvas, Moodle, BlackBoard Ultra, D2L, Sakai, and Perci.

UX Developer at Hagerty Insurance Agency, Traverse City, MI.

2018–2020

Designed and implemented a components-based pattern library used in a refresh of a large, customer facing site • Collaborated closely with designers to implement reusable JavaScript components built with React.js in Storybook.js. and in the formation and development of an Agile team • Built a pattern library using Vanilla JavaScript, HTML and CSS from simple components like callouts and buttons up to whole page templates. • This pattern library was then used to standardize the look and feel of all customer facing pages in an efficient and consistent manner. • Maintained and updated legacy site components to improve their design, promote maintainability, and ensure reusability.

Front End Developer at General Electric, Van Buren Township, MI.

2016–2018

Designed and implemented responsive web applications and tools that conformed to specialized industry use-cases • Created and leveraged reusable and configurable front end interface design used by teams developing six different software applications, in collaboration with principal UX designers • Led the front end development team to successful releases for over fifty Agile development iterations and code deployments. • Built two SPAs from the design and MVP stages

to a stable production product, each adopted by hundreds of GE employees. • Each SPA was built with a front-end Polymer.js app connected via Node.js middleware to a Spring Boot backend app. • Each SPA was connected via a cloud platform called Predix to microservices that handled authorization/authentication, data ingestion, and a Postgres database. I worked with Webpack build tooling which evolved as the projects progressed and became more complex. • Improved page load times by analyzing applications with profiling tools including Lighthouse. • Performed SAST/DAST security scans and vulnerability mitigation to ensure our applications were secure and compliant.

Application Developer Intern at Lyons Consulting Group, Ann Arbor, MI. 2016–2016

Built CSS/SCSS styling on Cart/Billing pages of large customer facing e-commerce site. • Helped implement multi-lingual e-commerce sites. • Integrated OAuth 1.0 and 2.0 with Salesforce Commerce Cloud to allow users to connect to an application with Facebook / Instagram / Twitter / Pinterest. • Configured and Installed PayPal for a Salesforce Commerce Cloud site upgrade. • Modified PayPal Payment logic to implement customer loyalty programs. • Wrote and modified Vanilla Javascript and Demandware script. • Gained experience with Grunt and Gulp build tooling. • Learned debugging using Chrome Developer Tools and Eclipse IDE.

EDUCATION

Bachelor's Degree in Computer Science, Eastern Michigan University, Ypsilanti, MI.

Associate's Degree in Liberal Arts, Washtenaw Community College, Ann Arbor, MI.

COVER LETTER

Evan Williams — (734) 747-4194 — evan@welltrek.com

September 22, 2025

Dear Hiring Manager,

I am pleased to be applying for position number 270067 (Applications Programmer Assoc) at the University of Michigan. My extensive experience designing and developing applications using JavaScript frameworks like Vue.js, Polymer.js, and React.js matches well with your requirements. I have also worked with various CMS and LMS systems including Sitecore, Salesforce Commerce Cloud, and WordPress as well as Canvas LMS, Blackboard LMS and Moodle LMS. In addition, my background using Agile, Scrum, and Kanban methodologies with design and development teams has given me the skills to adapt to changing requirements while meeting scheduled milestones.

In my most recent experience at Keypath Education, I have been developing web applications using Vue.js, JQuery, and other JavaScript libraries as part of custom courses for university students. The applications I have been working on have MySQL databases and are integrated into Learning Management Systems (LMS). While working at Keypath I have been gaining significant experience building code to WCAG guidelines and have worked on numerous efforts to improve the overall accessibility and screen reader support for new and existing applications.

In my previous experience at General Electric (GE), I developed web-based applications used to visualize parts fulfillment and manufacturing logistics data at GE engine factories. These cloud-based applications tracked and labeled the managed information for tens of thousands of individual parts orders throughout all of GE's work-in-progress engines in numerous facilities around the US and Internationally. In developing these applications, I leveraged Polymer.js/Node.js as well as Postgres, and Redis for use in the back-end of two dashboard applications. During my time at GE, I developed numerous applications and had more than 50 successful releases in a 2-year time frame with a small agile development team.

I also gained experience with C#, .Net Core, React.js and Sitecore while working at Hagerty. Using Sitecore at Hagerty strengthened my understanding of differing content management systems in combination with my prior experience working for Lyons Consulting Group developing on Salesforce Commerce Cloud for eCommerce. At Lyons, I worked with OAuth 1.0 and 2.0 integrations as part of a rewards system that interfaces with various social media's APIs and applications. Outside of work, I have built and maintain several websites with Gasby/React and Redux as well as some made with WordPress.

Thank you for taking the time to review my credentials and previous achievements. I am very passionate about being a team player, and working within a team to make great products. I hope to have the opportunity to discuss my work and experience in greater detail with you.

Sincerely,

Evan Williams
